AWA PDF

Produce, protect and check PDF, with no infrastructure

awacloud.com/offers

AWA PDF reads and writes PDF 2.0 (ISO 32000-2) and reads legacy PDF 1.7, in the browser, in a worker or on your server. The document never leaves the machine, and there is no rendering server or service to run.

nothing leaves your device

Features

Produce

pages, text and images; TrueType fonts (and OpenType fonts with TrueType outlines) embedded as subsets; AcroForm forms, embedded files and XMP metadata read, kept and written back.

Protect

AES-256 encryption.

Sign

PAdES signatures — the European standard for signing PDF documents, recognised under eIDAS — produced in the browser (RSA-PSS, ECDSA, Ed25519), from level B-B up to B-LTA when your integration supplies the timestamp and revocation material; the library makes no network call. If your signatures must be validated by Adobe Acrobat, use ECDSA: Acrobat does not validate EdDSA (Ed25519) signatures, which other tools, such as OpenSSL, verify. Signature in detail.

Check

PDF/A profile detection, PDF/X checks, a first level of automated PDF/UA-1 and Well-Tagged PDF accessibility checks — PDF/A and PDF/UA being the archiving and the accessibility profiles of PDF — to catch defects before publication, in your CI (your automated build and test pipeline) rather than by hand.

Limits

- AWA PDF focuses on producing, protecting, signing and checking your documents. On-screen display remains the job of your viewer, and reading scanned PDFs that of an OCR tool.
- PDF/A and PDF/UA checks catch deviations before publication; the declaration of conformity remains yours.
- Signature verification confirms that the signed bytes have not been modified and that the signature matches the signer's key. Certificate-chain validation, revocation checking and qualified status are the job of your trust service provider.

Licence and pricing

€4,900 excl. VAT

per application per year, unlimited users and servers.

Unlimited developers, servers and users; the documents you produce are yours, royalty-free. Commercial licence or AGPL-3.0-only. Shipping AWA PDF to your users' browsers or inside software you distribute? The AGPL then puts source-code obligations on you; the commercial licence exempts you from them.

Made with AWA PDF by AwaCloud. Opened here by AWA Viewer, on your device: nothing was uploaded. Offers and pricing: awacloud.com/offers
